

Getting Started

1. Carefully open the package containing your fish and discard any heating or cooling packs.

2. **IMPORTANT:** If you are setting up a **new aquarium**, please add the enclosed Tetra® AquaSafe® (as directed on the package) **before adding your fish** to help ensure that the water will be safe for them.

3. Please follow this **25-minute** procedure to safely acclimate your fish to their new home:
- Float the entire bag of fish in your aquarium for **15 minutes**.
 - Open the bag carefully and place approximately one cup of water from your aquarium into the floating bag (with the fish still inside the bag).
 - Wait another 5 minutes**, then repeat the step above (i.e., place approximately one additional cup of water from the aquarium into the floating bag with the fish still inside).
 - Wait another 5 minutes**.
 - Next, slowly empty the entire contents of the bag (including the water) into your tank.
