

Superior Filtration

For cleaner water and healthier fish.

EVERY AQUARIUM SHOULD INCLUDE BIOLOGICAL FILTRATION TO PROMOTE GROWTH OF BENEFICIAL BACTERIA, WHICH NEUTRALIZE AMMONIA.

Tetra® Multi-Stage Filtration works in three ways:

Whisper® Bio-Bag® Filter Cartridges offer mechanical and chemical filtration.

Whisper® Bio-Foam® filter offers biological filtration.

1 Mechanical Filtration

Water passes through the cartridge where dense, dual-sided mesh catches debris and waste.

2 Chemical Filtration

Premium Ultra-Activated® Carbon removes odors and discoloration for sparkling clear water.

3 Biological Filtration

The Bio-Foam® filter creates a large three-dimensional area for cultivating aerobic bacteria, eliminating toxic ammonia and nitrites from aquarium water.

Better carbon means cleaner, clearer water:

Tetra® Ultra-Activated® Carbon is made using high temperature steam activation.

Specially sized and far more effective than inferior coconut, wood or peat-based carbons

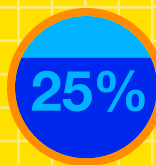

Removes more odors and impurities¹

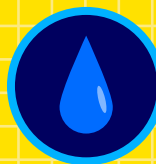

Remember:

Change your filter cartridge once a month or when you see a reduction in water flow.

Change 25% of the water monthly.

Use a water conditioner to make tap water safe for fish.
